WANDERLUST INTELLIGENCE PLATFORM

Property Walk Recorder Guide

How to start, narrate, select rooms, photograph, review, recover, upload, and process a field walk without losing evidence.

UPDATED FOR RECORDER BUILD 22

Remember: Review Walk saves the session locally. Nothing leaves the phone until End Walk & Upload is confirmed. The walk is fully complete only when it reads Uploaded & Processed.

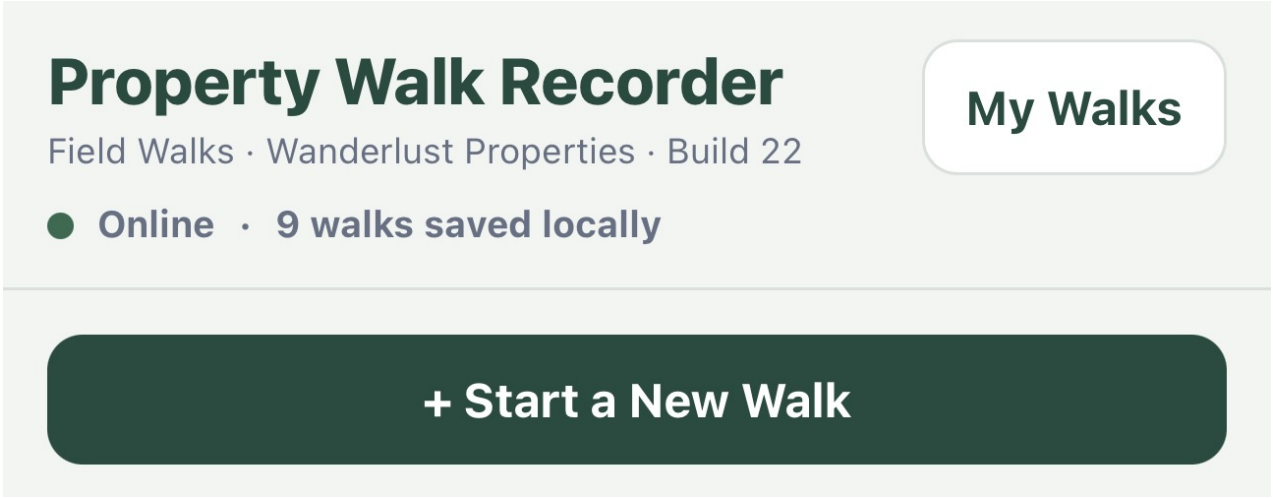

Authorized Wanderlust leadership access only. Updated November 2, 2026.

01 - Before You Begin

A reliable walk starts with a ready phone, a visible microphone signal, and the correct destination.

- Charge the phone and confirm adequate storage.
- Open the Recorder online so registered properties synchronize.
- Confirm the intended phone, AirPod, or Bluetooth microphone.
- Never clear browser site data while a walk is saved locally.
- Keep the Recorder in the foreground. If it was backgrounded, verify the microphone again before speaking.

> Field rule: Keep the page open through both upload and processing. Use strong Wi-Fi for large walks whenever practical.

Build 22 home screen: verify the build, online status, and local-walk count.

02 - Start the Correct Visit

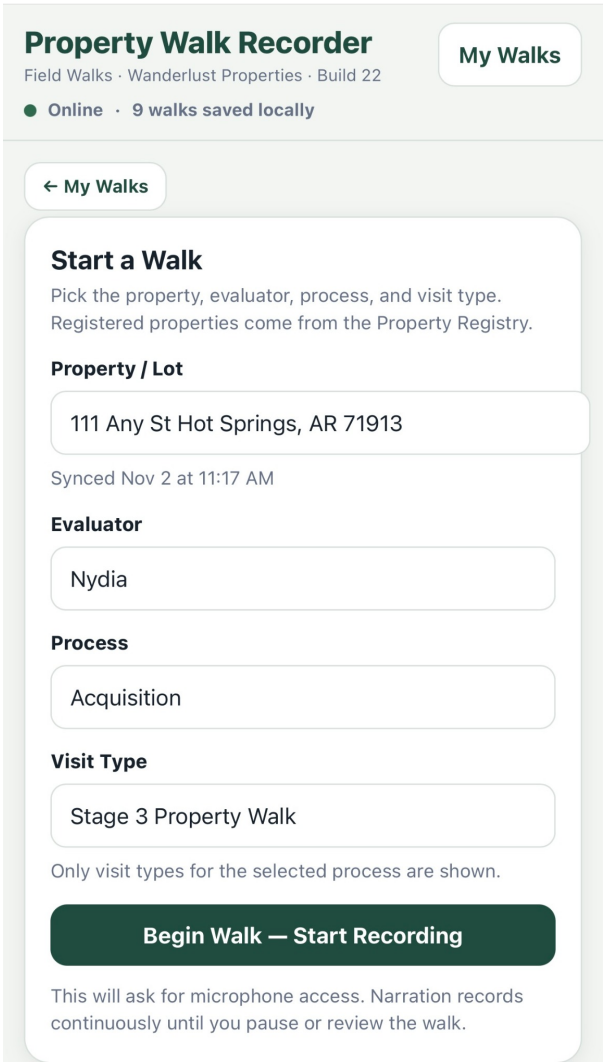

The property, evaluator, process, and visit type control the Walk ID and destination.

Registered property

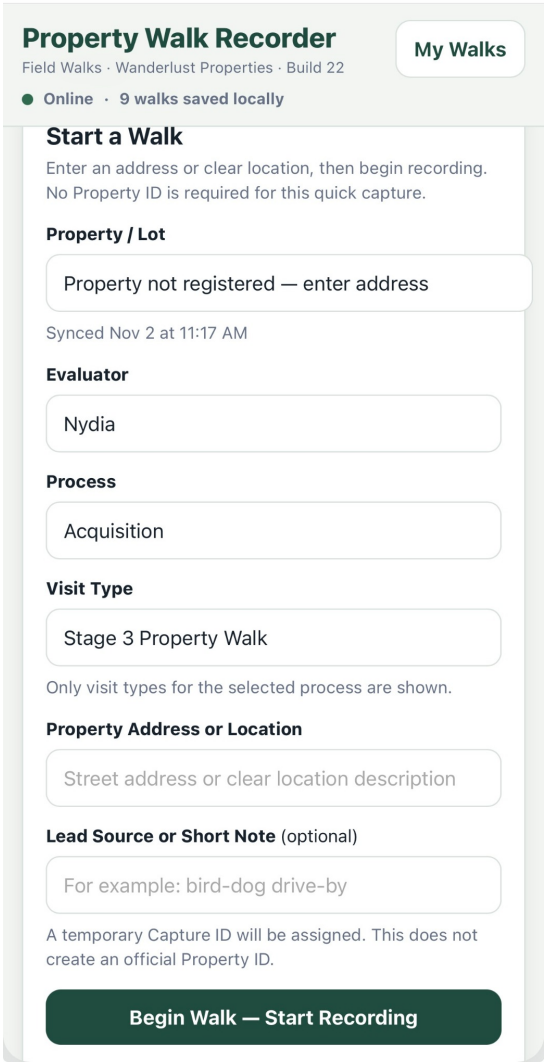

1. Select Start a New Walk.
2. Choose the synchronized property or refresh while online.
3. Choose the evaluator, Process, and matching Visit Type.
4. Select Begin Walk - Start Recording and allow microphone and camera access.

Unregistered property

Use for a bird-dog lead, drive-by, or useful visit when no official Property ID exists. Enter the real address or a precise location. A temporary Capture ID is created; an official Property ID is not.

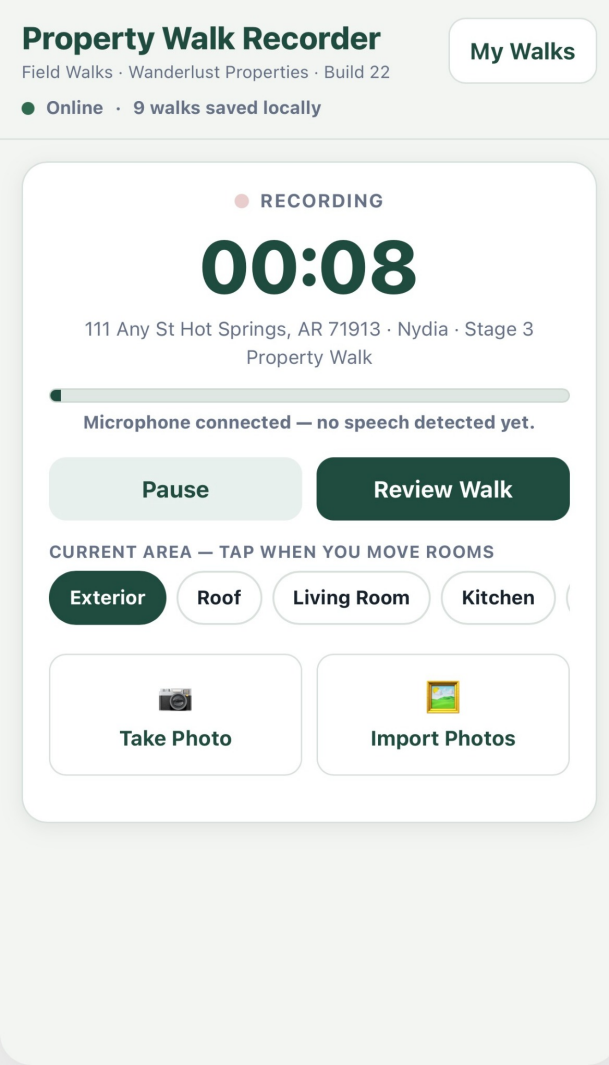

Registered setup

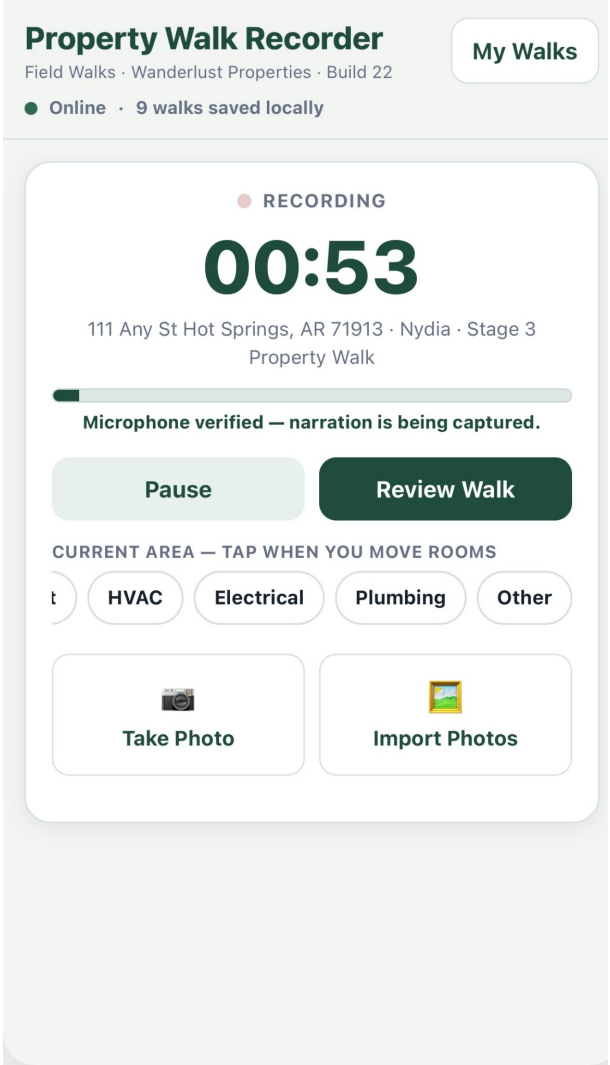

Unregistered setup

03 - Verify the Microphone

Begin speaking and watch the input meter. Continue only after the Recorder confirms that narration is being captured.

Connected, but speech not yet verified

Verified narration capture

> If the meter does not respond, stop and correct the microphone before doing the walk.

Pause only for a real break

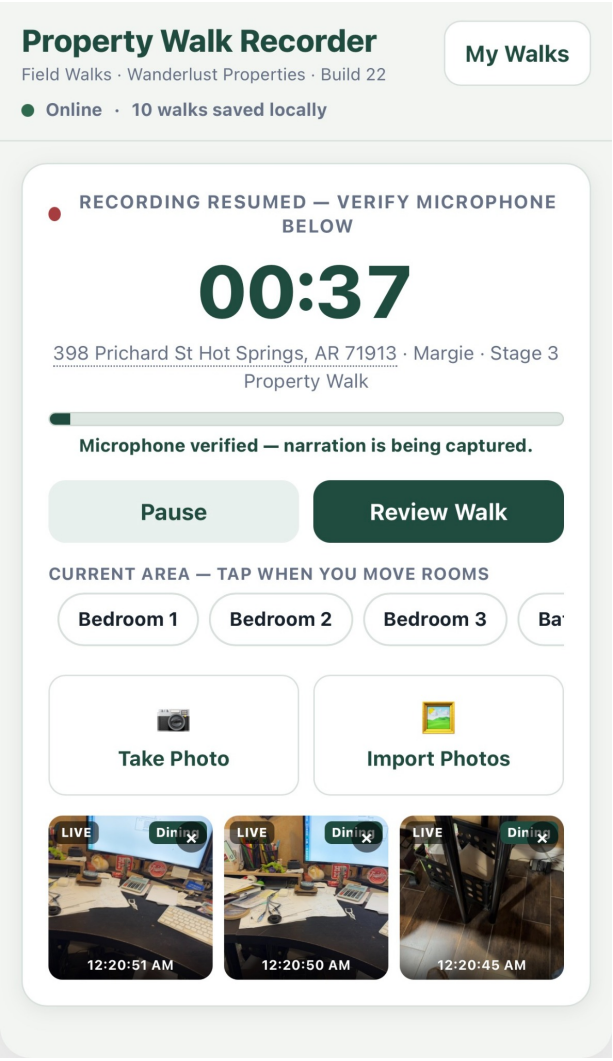

Pause for a phone call, unrelated conversation, or genuine interruption. Resume before speaking and wait for microphone verification. Every intentional Pause/Resume creates another raw narration clip; the Walk Processor combines those clips chronologically.

04 - Select the Current Room

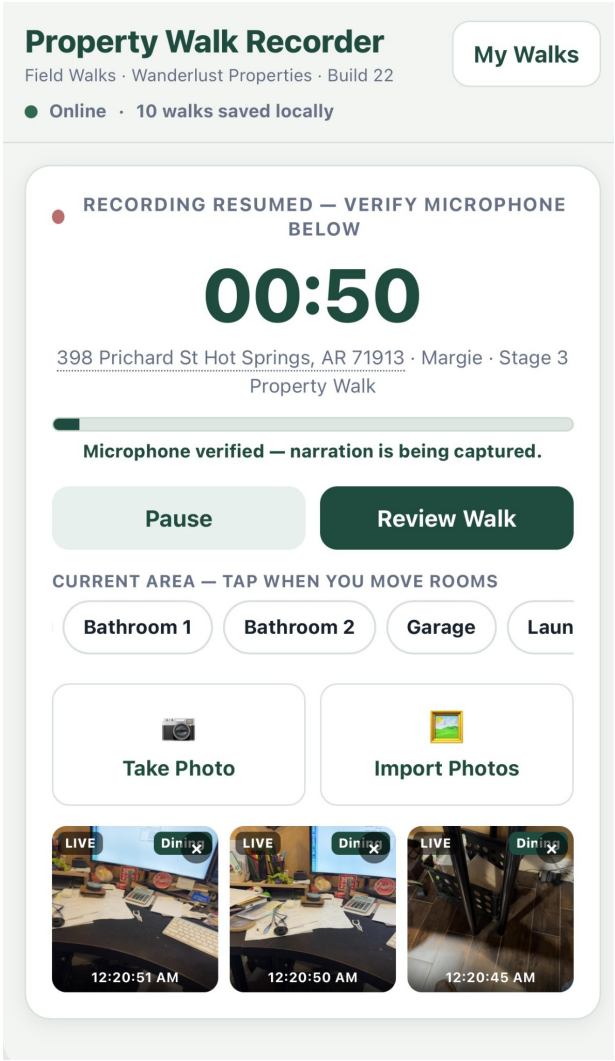

Tap the room before describing or photographing it. The selection creates the room timeline and stamps every photograph.

1. Tap the correct room every time you move.
2. Announce that same room name aloud.
3. Then narrate and photograph the room.
4. Use Other for Bedroom 4, Bathroom 3, or another custom space.

> Standard property: use Bedroom 1, Bedroom 2, Bedroom 3, Bathroom 1, and Bathroom 2 in a consistent physical walk order.

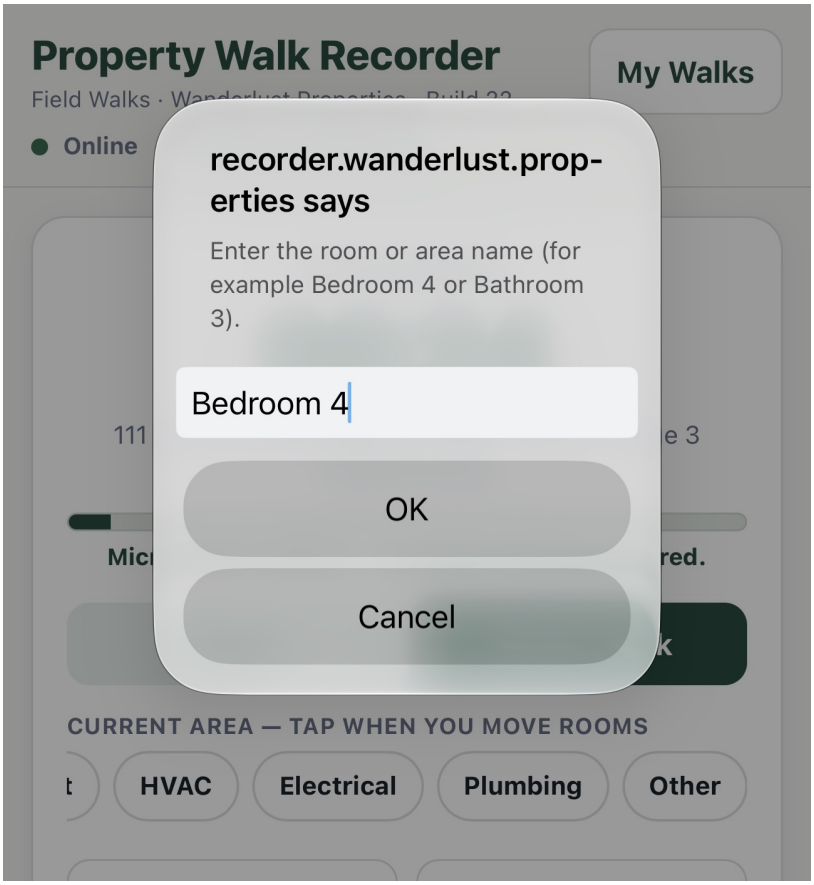

Numbered bedroom buttons

Numbered bathroom buttons

Custom Rooms

Use Other when the room is outside the standard list.

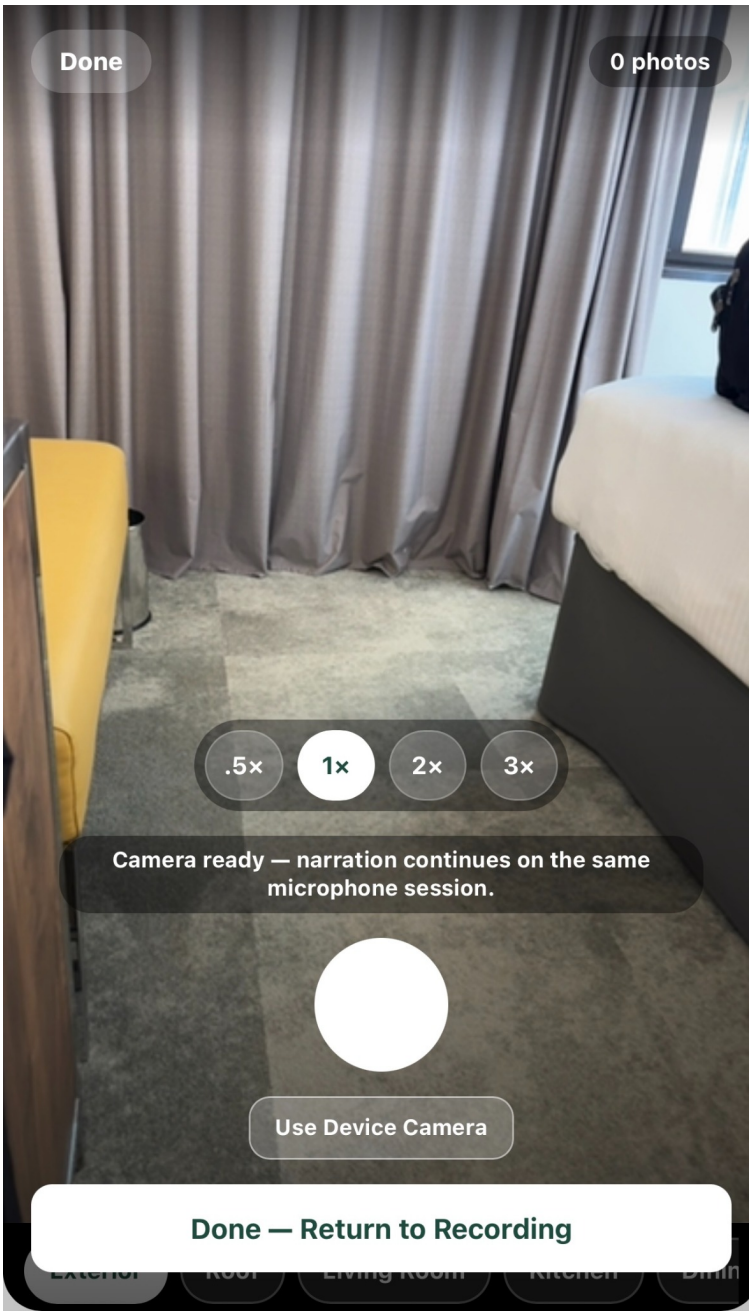

Enter the exact custom name. Photographs taken afterward retain this custom room label.

05 - Photograph Without Breaking Narration

Build 22 maintains one combined microphone-and-camera session. Opening and closing the in-app camera no longer creates an audio break.

1. Tap the correct current area first.
2. Open Take Photo.
3. Confirm that narration continues on the same microphone session.
4. Take an overview, opposite view when useful, and condition details.
5. Use Done or Done - Return to Recording. Do not close the browser.

> Do not pause just to take photographs. Continue narrating naturally while using the in-app camera.

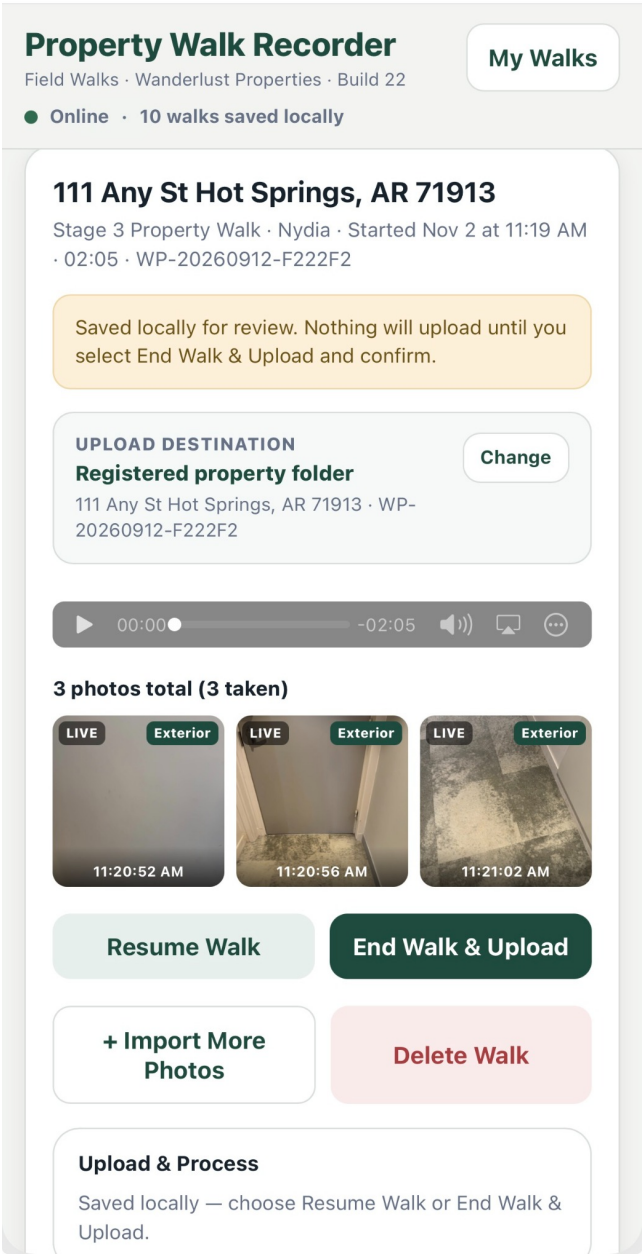

Camera ready: narration continues on the same microphone session.

06 - Review, Resume, and Finalize

Review Walk closes the current narration segment and saves the session locally. It does not upload anything.

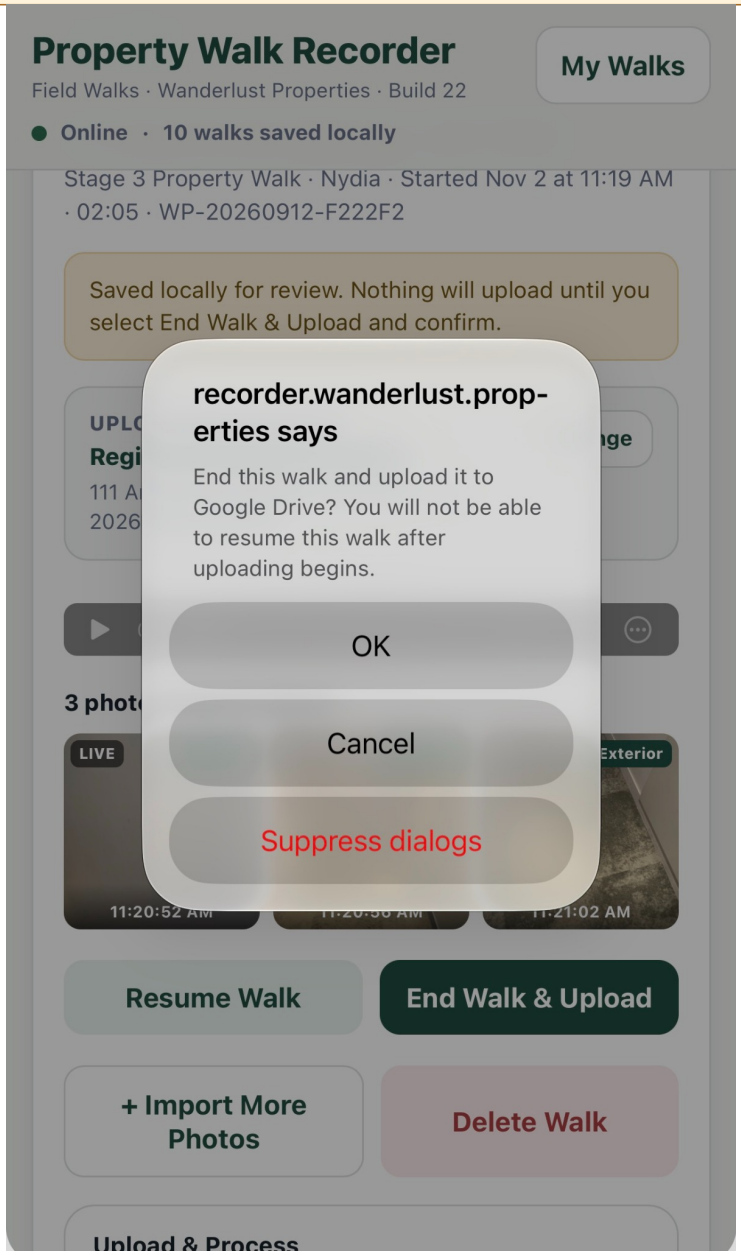

1. Review the narration, photographs, and room labels.
2. Select Resume Walk if anything is missing.
3. After resuming, verify the microphone again.
4. Repeat Review and Resume as many times as necessary.
5. Confirm End Walk & Upload only when no more evidence is needed.

Review screen: inspect the narration, room-labeled photographs, destination, and action buttons.

Final Upload Confirmation

Finalization is irreversible. After upload begins, the walk cannot be resumed.

Select OK only after the complete walk has been reviewed.

07 - Confirm the Destination

A completed walk should never remain trapped on the phone because a Drive folder was renamed, missing, or not yet registered.

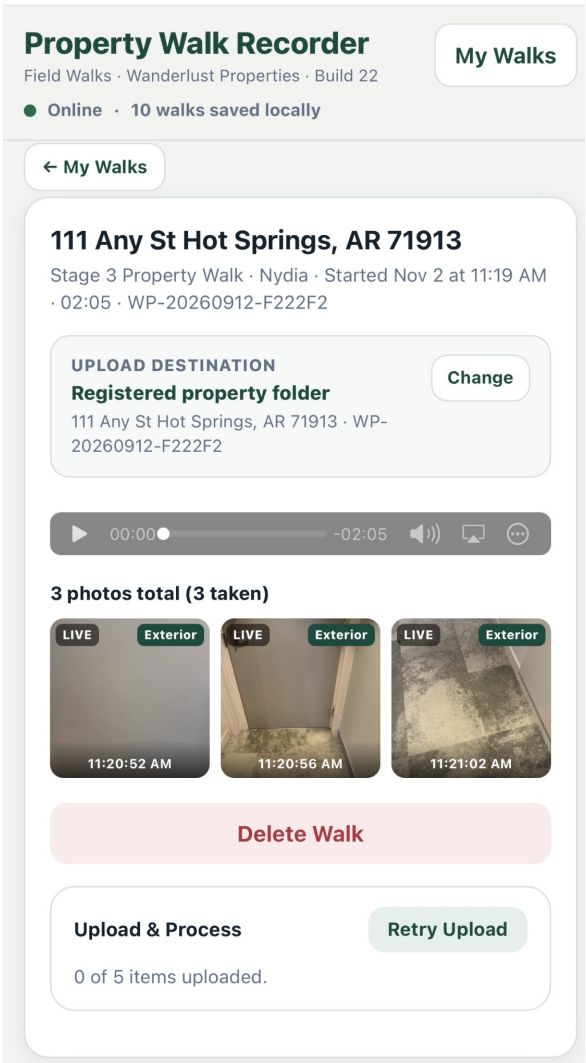

Destination	Use it when
Registered property folder	The Registry resolved the selected property and walk destination.
Change property	The wrong property was selected or Registry resolution needs to be repeated.
Manual Drive folder	You know the correct folder and can paste its Drive link.
Recovery Inbox	The property folder cannot be resolved. Move the uploaded walk later.
Unregistered capture	No Property ID exists. A temporary Capture ID is used.

Avoid duplicate uploads. If some files already reached an earlier destination, follow the Recorder warning before making a complete copy elsewhere.

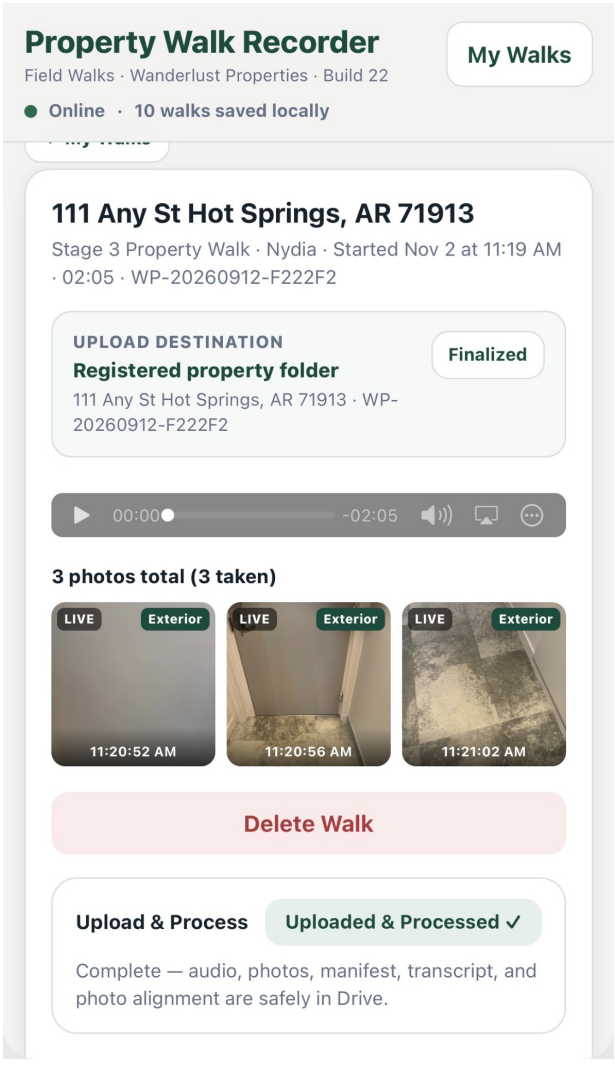

08 - Upload and Process

Upload safeguards the raw evidence in Drive. Processing creates the combined transcript and photo alignment.

1. Confirm End Walk & Upload.
2. Keep the Recorder open while every item uploads.
3. If upload stops, reconnect and select Retry Upload.
4. If media is safe but processing fails, select Retry Processing - do not re-upload the media.
5. Finish only when the status reads Uploaded & Processed.

Retry Upload: complete the missing Drive items

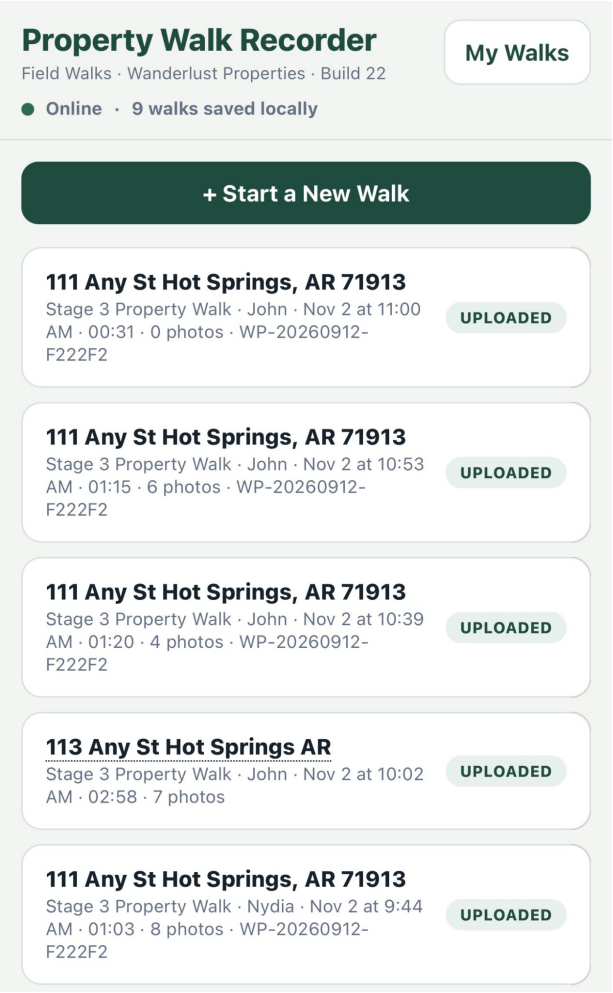

Complete: transcript and photo alignment are also in Drive

09 - Recover an Interrupted Walk

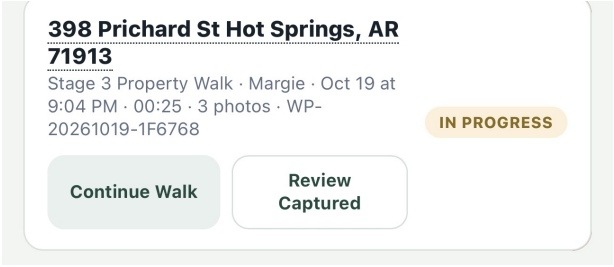

My Walks is local to that browser profile and device. It does not depend on property synchronization.

- In Progress: select Continue Walk or Review Captured.
- Ready for Review: resume to add evidence or finalize when complete.
- Saved Locally: reconnect and retry upload.
- Uploaded: raw evidence reached Drive; open the walk and confirm processing.
- Uploaded & Processed: the Recorder workflow is complete.

> Never clear site data or delete a local walk while recovery is pending.

My Walks list

In Progress recovery actions

10 - Narration Standard

Say where you are, describe what you see, state what is known, identify uncertainty, and explain whether an earlier concern was resolved.

Five non-negotiable rules

1. Announce the full address or precise location at the beginning.
2. Tap and announce every room or area change.
3. Describe property-specific conditions, not general construction advice.
4. Take overview and supporting detail photos while narrating the same area.
5. If interrupted, identify where you stopped and clearly announce where you resume.

Recommended order

Front approach and site - Exterior in one direction - Roof - Enter through front door - Interior in a consistent physical path - Systems and equipment - Closing summary.

State uncertainty precisely

Example: The floor dips toward the center of Bedroom 2. I cannot determine from this walk whether the cause is finish flooring, subfloor, framing, or foundation. This needs a focused floor-system review.

Closeout Checklist

- The address, evaluator, process, and visit type are correct.
- The microphone showed verified narration capture.
- Every actual room was selected, announced, and covered.
- Bedrooms and bathrooms were numbered consistently.
- Material areas have overview and useful detail photographs.
- Open questions, resolved concerns, optional work, and corrections were stated clearly.
- Narration and room labels were checked in Review.
- The Drive destination is correct.
- The final status reads Uploaded & Processed.

Suggested closing statement: Walk summary: the principal unresolved items are [list]. The issues resolved during the walk are [list]. The optional scope items are [list]. That completes the [visit type] for [full address or location].
